

Scientist – Job Description

About the Company

Snapdragon Chemistry, Inc. is a leader in continuous flow services and solutions. Our company is catalyzing the transformation of research, development, and manufacturing across industries where organic chemistry underpins product development.

We rely on our most valuable resource – our people – to maintain a leadership position in this market. As part of our dynamic team, you will have the opportunity to collaborate with world-class leaders in flow chemistry and product development, as well as with dedicated colleagues while also cultivating and furthering your career. At Snapdragon Chemistry, we strive to create an environment of innovation and excellence where mutual respect and teamwork underpin our culture.

Job Description

Snapdragon Chemistry is currently seeking exceptional candidates for the position of Scientist in analytical sciences. A successful candidate will be joining a group of innovative and entrepreneurial scientists, with broad deliverables including the design of synthetic routes amenable to continuous flow processing, the development of reactor systems incorporating cutting-edge flow technology, and delivering intermediates, APIs and high value specialty chemicals to our clients.

We are looking for a candidate who has a passion for working in a fast-paced, dynamic environment. The ideal candidate will have a BS in chemistry with 8+ years' experience or MS with 5+ years' experience or PhD with 1+ years' experience in analytical chemistry. The candidate should have a broad experience of method development of analytical technologies such as (U)HPLC, GC, KF, LC/MS, NMR, TGA, DSC, particle size analyzer etc. to characterize and quantitate pharmaceutical synthetic molecules. Knowledge of regulatory guidelines and experience in quality control testing are preferred. Candidates must possess strong written and oral communication skills.

Responsibilities

- Leverage scientific knowledge and develop technology to solve analytical challenges in pharmaceutical process development.
- Lead GMP manufacturing related analytical activities such as method qualification, validation, and day-to-day QC activities.
- Provide technical support for analytical method troubleshooting, equipment operation and maintenance.
- Contribute to activities that build upon Snapdragon Chemistry's proprietary knowledge and technology fulfill their value creation potential.
- Participate in project teams to complete complex deliverables within stringent timeline and communicate results to key stake-holders.
- Ensure up-to-date knowledge of continuous flow technology, process analytical technologies and process development principles.
- Ensure that the integrity and profile of Snapdragon Chemistry within the scientific community are maintained at a high level, consistent with the requirements of the business.

Qualifications

Education:

- A BS, MS or PhD in chemistry or related field. GMP experience is highly preferred.

Required Experience and Skills:

- Experience in the use of common analytical techniques for qualitative and quantitative analysis of organic reactions
- Experience in phase appropriate method development, qualification and/or validation
- Familiar with ICH guidelines and GMP regulations for pharmaceutical development and quality control
- Demonstrated ability to take initiative, be creative and innovative, and work productively and efficiently in the laboratory
- Strong written and oral communication skills
- Excellent collaboration skills, team oriented and invested in the success of others
- Ability to celebrate differences and encourage scientific openness and frank discussion
- Demonstrated willingness to comply with, and encourage amongst others, the ethical and cultural standards of Snapdragon Chemistry

We value our employees, who are key to our company's success. As such, we offer our employees a competitive rewards program. If you need an accommodation for the application process, please email us at careers@snapdragonchemistry.com.
